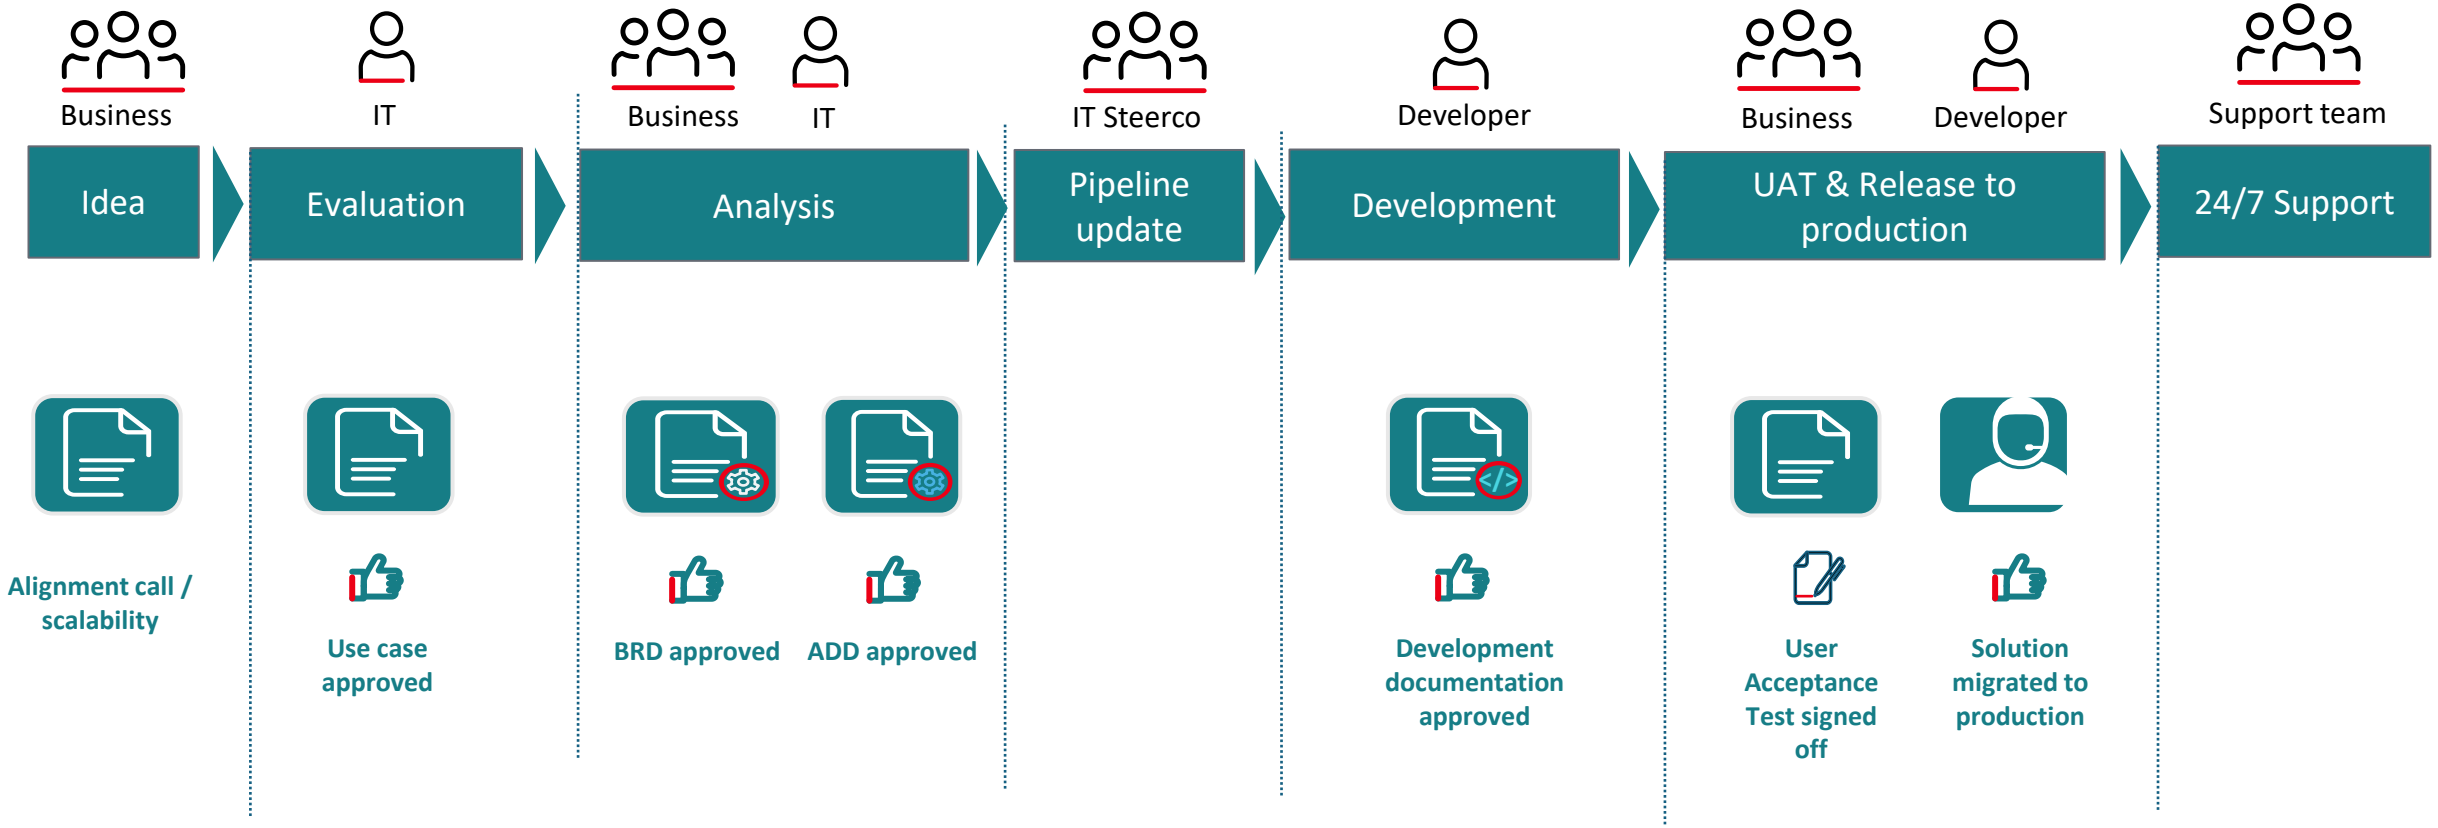
INNOVATION ZONE

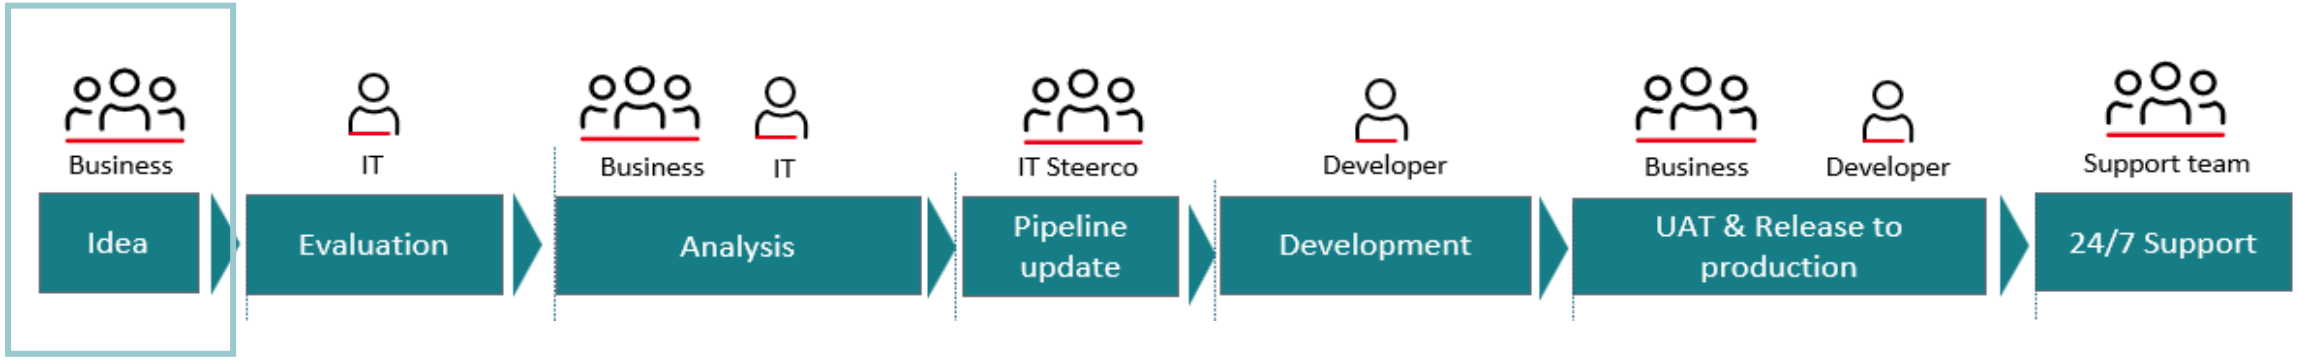
AUTOMATION COLLABORATION FRAMEWORK

Automation Life Cycle – Madison88



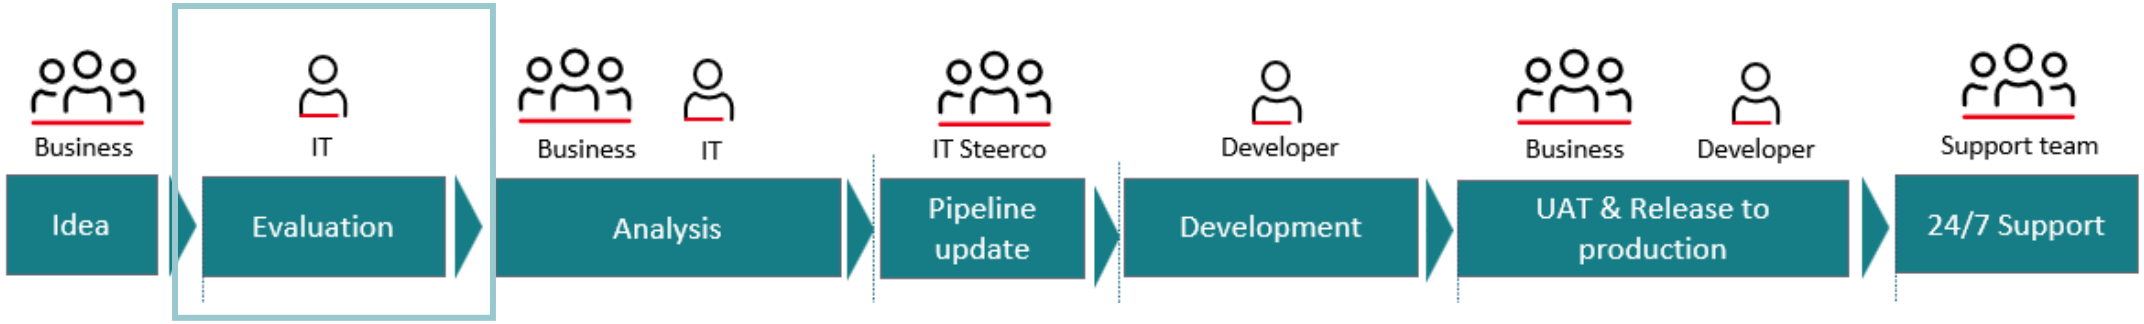
Business = Business Operations representative in the project
BRD = Business Requirement Document
ADD = Automation Design Document
Developer = Developer assigned by Global IT Systems Manager
BPA = Business Process Analyst

Idea Generation



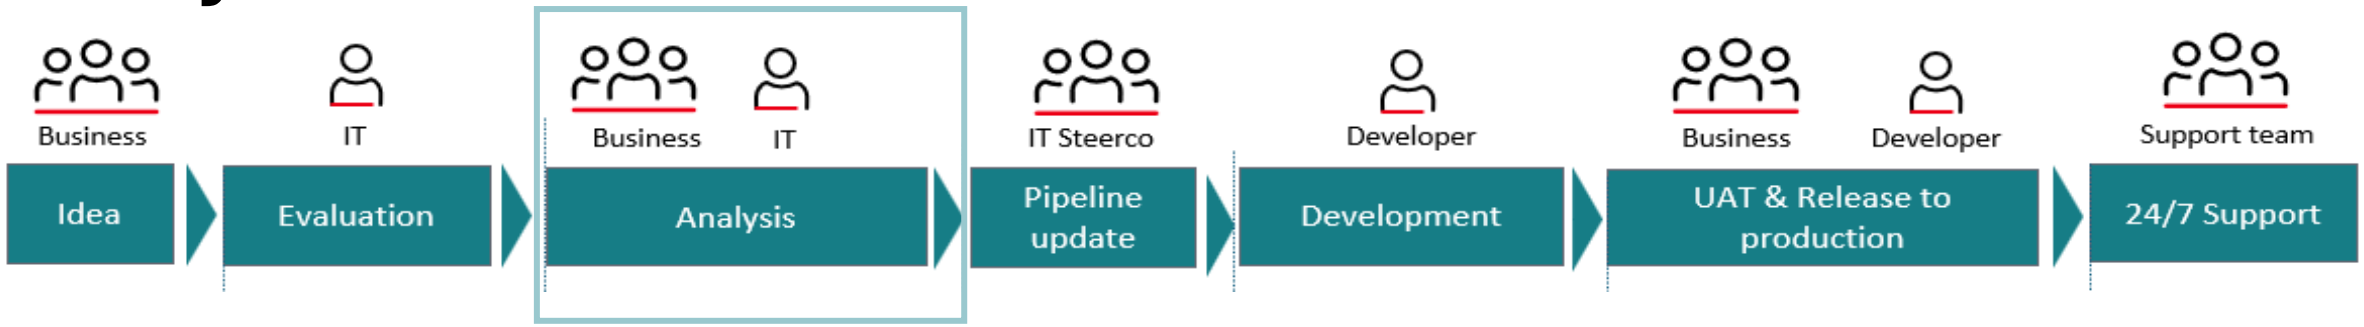
Activity	Responsible	Output
Raise automation idea in Idea Intake Tool	Any role in Madison	Idea registered in Idea Intake Tool
Validate idea from a process standpoint (is idea compliant and/ or included in any parallel project, duplicate check)	IT Systems Manager	Idea is validated process-wise and can be brought for evaluation to IT Steering Committee
Scalability Check	Information Technology Department	General / country specific requirements CONFIRMED with all necessary exceptions

Evaluation



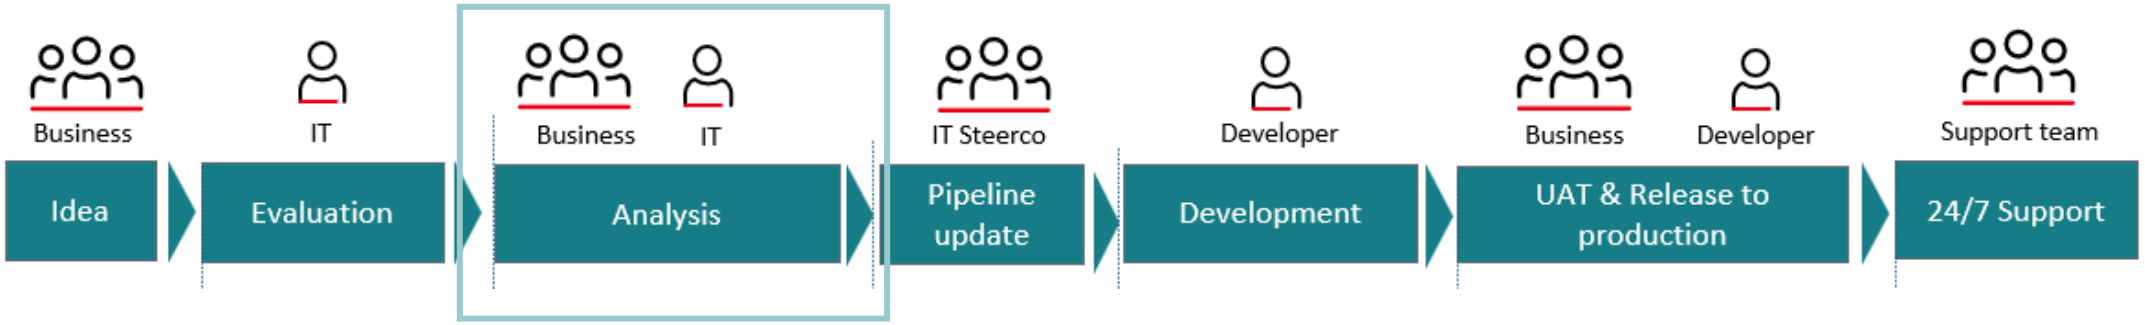
Activity	Responsible	Output
Organize evaluation meeting Participants: Business Process Analyst, Business Operations (idea owner + team manager, if poss.)	IT Systems Manager / Business Process Analyst	Evaluation meeting set-up
Conduct evaluation meeting Aspects to be covered: Brief description of the process, stakeholder mapping, applications involved and timeline requirements	IT Systems Manager / Business Process Analyst *(Business Operations to provide information)*	Obtain “Go” or “No Go” for automation
Determine scalability and estimate benefits Calculates estimated benefits - based on scalability, volumes, and timings; estimated benefits must be approved by Dept. Managers	IT Systems Manager / BPA and Business Operations	Estimated benefits approved
Estimate development effort Basis: Information collected in the Idea Intake Tool	IT Systems Manager and Developer	Estimated development effort (in workdays)
Compile Business Case and identify prioritization	IT Systems Manager	Business Case Template filled and approved

Analysis 1 of 2



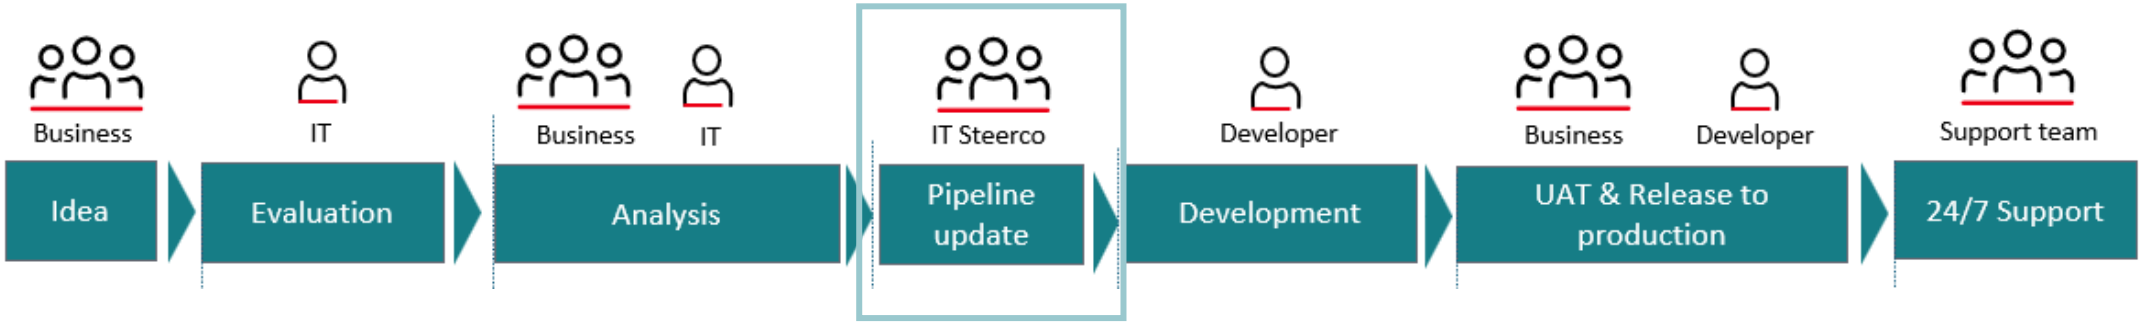
Activity	Responsible	Output
Create the Business Requirement Document	Business Operations with support from Business Process Analyst	BRD Completed and Approved
Create the Automation Design Document	IT Systems Manager	Process diagram/ Process description/ Exceptions/ Notifications
Obtain application owner approval during regular meeting between BPA and app owner/ ad-hoc meetings	BPA with support from Business Operations	Written approval to pursue Use Case (Application owner reviews feasibility and security of interaction to the system)
Request technical user creation*	Business Operations with support from Business Process Analyst	Accesses to both Factory Acceptance Testing (FAT) and PROD. environment
Obtain Global Process Owner approval	Business Process Analyst with IT Systems Manager	Formal approval to pursue Use Case

Analysis 2 of 2



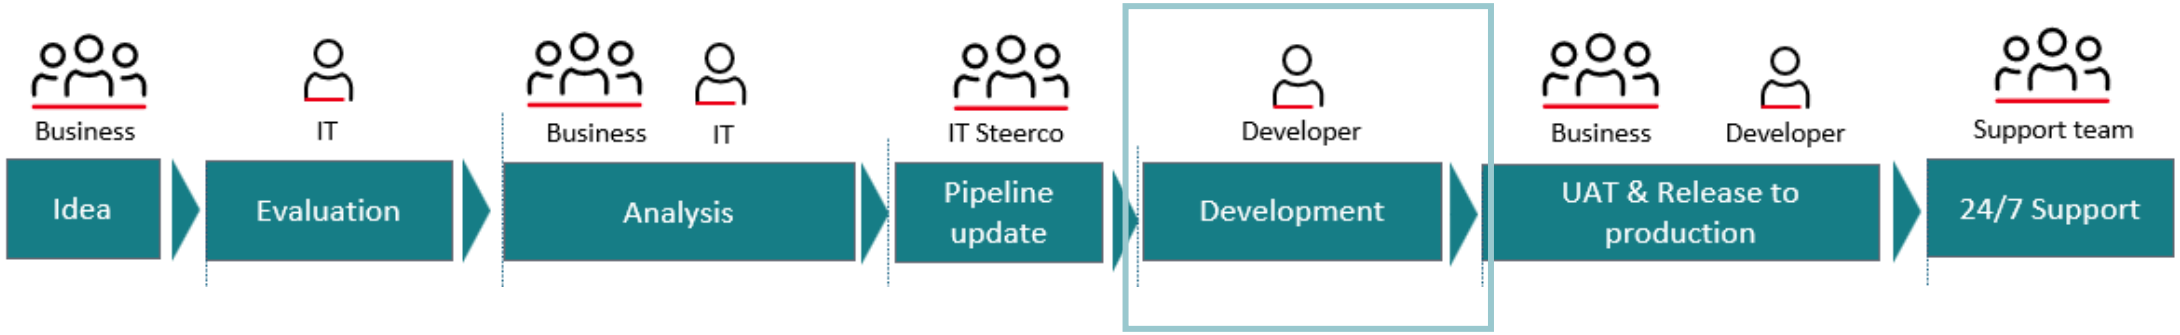
Activity	Responsible	Output
Review Effort Estimation	IT Systems Manager	Effort provided as development days
Complete the Automation Design Document	IT Systems Manager	Automation Design Document fulfilled and approved

Pipeline Update



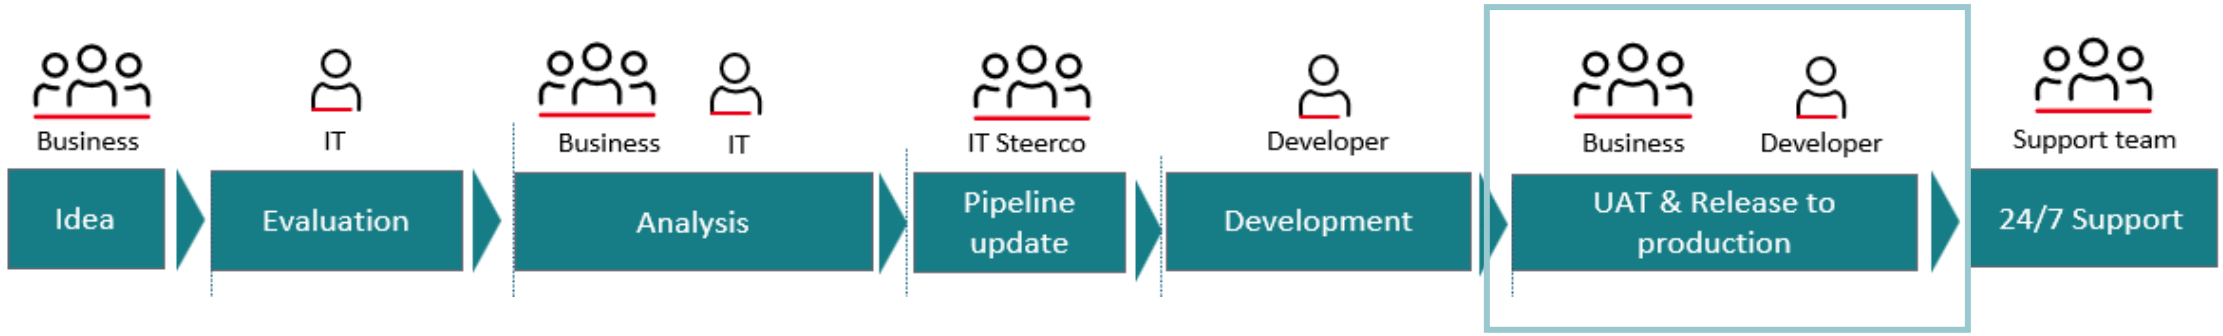
Activity	Responsible	Output
Place Use Case in Pipeline	IT Systems Manager	Use Case Pipeline Updated
Pipeline and Prioritization approval	IT Steerco	Green light for Development

Development



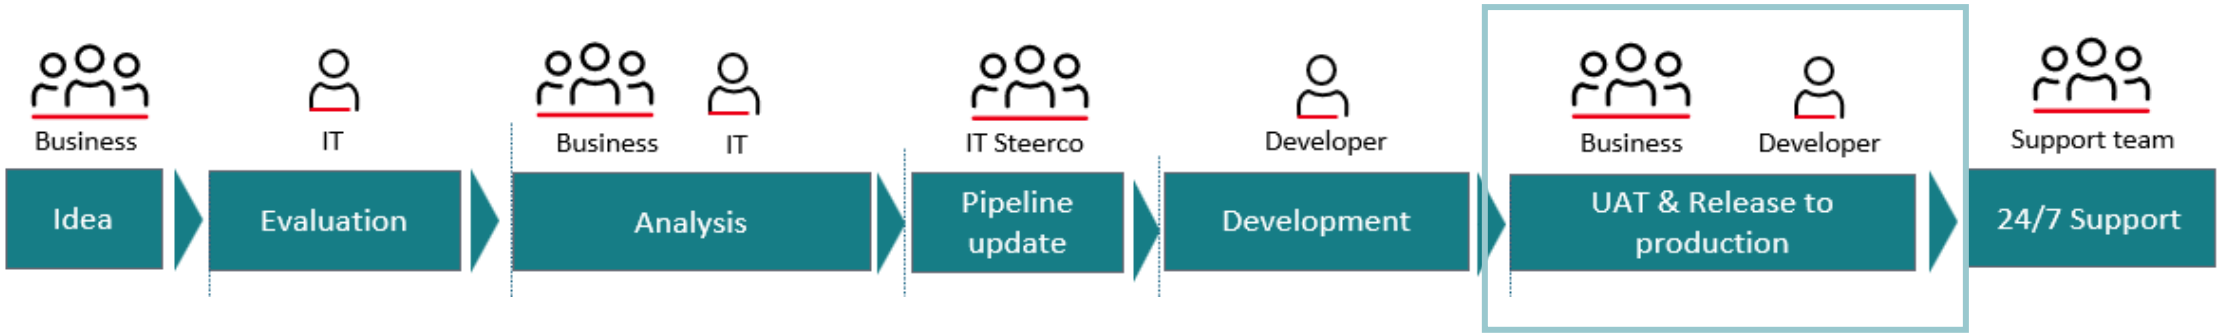
Activity	Responsible	Output
Test Access to FAT and Prod environment	Business Operations	Access to both FAT & PROD environment confirmed
Design Solution Architecture	Information Technology Team	Solution Concept created
Automated Solution Development	IT Systems Manager: Organizes project backlogs into sprints, organizes SCRUM Meetings, presents backlog status, signals roadblocks	Working Solution
Organize internal solution testing	Developer	Technical Testing passed

User Acceptance Testing



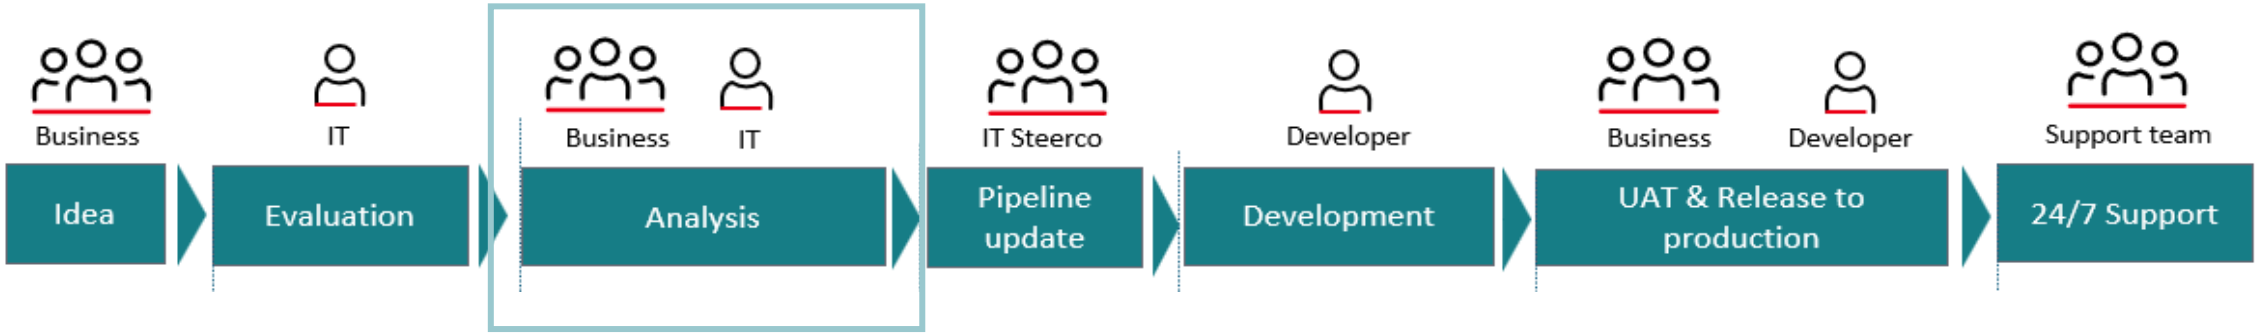
Activity	Responsible	Output
Showcase automated solution	Developer	Solution Showcase
Create User Acceptance Test Scenarios	Business Operations	Test Cases created
Plan User Acceptance Test	IT Systems Manager	Aligned dates for UAT execution
Perform User Acceptance Test	Business Operations	User acceptance passed
Obtain formal UAT approval	Developer	UAT signed off obtained

Release to Production



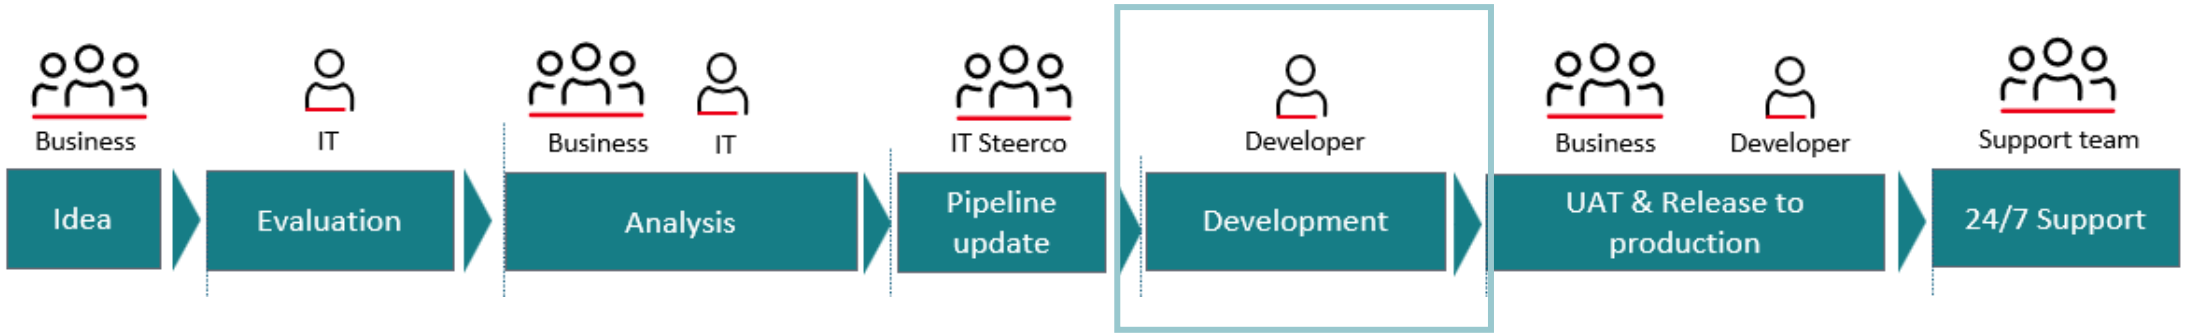
Activity	Responsible	Output
Organize Production release	IT Systems Manager	Automated solution released to PROD environment
Agree on stabilization period	IT & Business Operations	Defined stabilization period
Obtain Stabilization Sign Off	IT Systems Manager	Official sign off that the solution is stable
Calculate Actual benefits	Business Process Analyst	Actual benefits calculated and approved

Managing Change Request



Activity	Responsible	Output
Raise a Change Request	Business Operations	Change Request Template filled-in
Determine scalability and estimate benefits	BPA & Business Operations	Estimated benefits calculated
Estimate development effort and Technical requirement	IT Systems Manager, Developers	Estimated development effort (in workdays)
Obtain Approval from Business Process Owners	Business Operations	Change request filed and approved
Conduct alignment meeting	Business Process Analyst, IT Systems Manager	Approved or Disapproved CR

Managing Change Request



Activity	Responsible	Output
Automated Solution Development	**Business Operations :** Define and prioritize product features for development **IT Systems Manager:** Organizes project Backlogs into sprints, organizes SCRUM Meetings, presents backlog status, signal roadblocks **IT Systems Manager:** Removes roadblocks, serves as escalation point	Working Solution
Organize production release	Information Technology Team	Automated Solution released to PROD environment
Obtain Sign Off from Business Operations	Information Technology Team	Official Sign OFF that the solution is delivered

Thank you!
AUTOMATION
